Priority Updates 8
Deploy using Microsoft Intune 8
Deploy SendGuard M365 using Office 365 Admin Centre 8

OVERVIEW

Standss is excited to announce the release of SendGuard Version 5 quarterly updates. This is a new release and contains new features, improvements, and bug fixes.

In this release, the significant update is the ability to push/control COM-Addin settings using the new Standss SendGuard License Management System. In addition, Delay Guard is now bundled with SendGuard Standard (SendConfirm).

Users of previous versions will need to contact their account manager at Standss (or email us at sales@standss.com) to upgrade and get their new license information.

The following sections have more information on what's new, what's fixed and updates/deployment.

SendGuard COM-Addin (Windows Desktop)

WHAT'S NEW

Ability to now push/control COM-Addin settings using the new Standss SendGuard License Management System

In the previous quarter's release, we introduced integration with the Standss SendGuard License Management system, enabling IT administrators to efficiently manage user subscriptions for SendGuard.

In this latest release, we have further enhanced this integration. IT administrators will now have the capability to centrally manage and control all COM-Addin settings directly through the Standss SendGuard License Management portal.

This eliminates the need to utilize ADMX/ADML files via Group Policy Objects (GPO) to manage and control these settings. All that is required is to deploy the MSI files to users, which will be provided by your Account Manager. You can configure and customize all the necessary settings on the administrative portal, export them, and upload them to the License Management Portal.

Delay Guard is now bundled with SendGuard Standard (SendConfirm)

With a SendGuard Standard (SendConfirm) license, you get Delay Guard at no extra cost. You don't need SendGuard Pro (Lite DLP) or SendGuard Premium (with Full DLP) licenses to enjoy the benefits of Delay Guard. It is included in your SendGuard Standard license for better email control and security.

Improvements

Update of Dot Net Framework from 4.7.2 to 4.8

SendGuard now mandates Dot Net Framework 4.8 on client machines for security enhancements and to stay compatible with recent Outlook updates.

Fixes

Installation Issues

We've resolved an installation issue where the add-in incorrectly detected the installed bitness in certain environments, causing it to not function properly.

SendGuard M365 Addin (For Windows Desktop, Outlook Web Access & Apple Mac)

WHAT'S NEW

DLP Attachment scanning on New Outlook for Windows (One Outlook)

Our add-in is fully compatible with the New Outlook for Windows (One Outlook) and can now support DLP checks within attachments when used in the New Outlook for Windows environment.

Please note that this functionality requires a SendGuard Premium (With Full DLP) license.

Reply All Notifications when Reply All is clicked on email with multiple recipients

SendGuard M365 now notifies users via Outlook notifications when "Reply All" is clicked on an email with multiple recipients. This notification appears at the top of the email and is also supported in Outlook for Android and Outlook for iOS.

Delay Send Feature is now bundled with SendGuard Standard (SendConfirm) Plan

With a SendGuard Standard (SendConfirm) license, you get Delay Send at no extra cost. You don't need SendGuard Pro (Lite DLP) or SendGuard Premium (with Full DLP) licenses to enjoy the benefits of Delay Send. It's included in your SendGuard Standard license for better email control and security.

Ability to Add Footer Notes on SendConfirm Prompt

IT administrators can now add, and format Footer Notes displayed on the SendConfirm screen, which can be managed through the Standss SendGuard License Management System.

These notes can include important compliance information to help users follow company email security guidelines.

[SendConfirm to Prompt when recipient threshold exceeds X number of recipients.](#)

SendConfirm now offers the capability to configure a new condition. This condition involves prompting the user for confirmation and verification when an outbound email contains a specified number of recipients (X or more). This feature empowers users to double-check and confirm their actions when sending emails to a larger group, enhancing email security and preventing unintended distribution.

Improvements

[Speed up SendConfirm on Outlook for Windows](#)

Previously, sending an email from Outlook for Windows had an approximately 8-second delay after clicking "Send" on the prompt. With the recent improvement, emails are now sent immediately after clicking "Send."

Fixes

[Email Recipients has quote in display name when typed manually in OWA.](#)

An issue arose when users manually typed email addresses in Outlook instead of using the auto-complete email address feature. In OWA (Outlook Web App), quotes were added to the display name, causing problems for SendGuard when sending out replies within email threads.

Standss SendGuard License Management System/Portal

WHAT'S NEW

[Deploy/Update/View SendGuard COM Addin Setting](#)

The portal now enables Office 365 Global administrators to control SendGuard V5 COM-Addin settings. Each subscription can have its own customized settings, making it simple to set different preferences for various departments. For additional information, please reach out to your Account Manager.

[Able to View/Update SendGuard M365 Settings](#)

The portal allows Office 365 Global administrators to control SendGuard M365 settings through a user-friendly interface.

Changes made in the portal take immediate effect on all client machines using SendGuard M365

MSP support

The portal now provides MSPs (Managed Service Providers) with the capability to efficiently view and manage their client subscriptions. This includes seamless management of users and settings, streamlining the process for MSPs to oversee and customize their client's email security solutions.

Add Bulk users to subscription.

The portal now allows IT administrators to perform bulk user uploads. A sample bulk upload file (CSV) is available on the manage subscription page, making it simple for admins to add multiple users to the subscription without the need for manual, one-by-one entry.

Search users in subscription

IT admins can now efficiently search for users assigned to each subscription from the manage subscription page. A search box is provided, and admins can apply filters to the list, such as sorting by email addresses in ascending or descending order. Pagination is implemented for each subscription, displaying up to 20 users at a time, with options for navigation through "Next" and "Previous" pages.

Improvements

Allowed Domains List

Each subscription now includes an allowed domain list, serving as a whitelist for authorized domains to use the subscription. Any other domain attempting to register with the subscription ID will be restricted. IT admins can view the allowed domain list on the manage subscription page. To make updates to this list, please get in touch with your account manager.

DEPLOYING THE NEW VERSION:

MSI

Please contact your account manager at Standss or email us at sales@standss.com for a link to the latest file. We can assist you to deploy the new version with your existing or new settings.

Use Group Policy Object (GPO) Templates (ADMX)

There has been some changes to the registry structure and as a result the ADMX template for deployment is done via GPO.

Please contact us at sales@standss.com for the updated ADMX/ADML file to deploy and maintain settings.

Priority Updates

SendGuard offers an annual maintenance model which ensures that businesses get the best updates and support from our highly skilled staff.

Deploy using Microsoft Intune

SendGuard for Outlook is a per-machine software and therefore can be deployed via Intune. SendGuard will be installed silently if all registered devices are set-up correctly.

Please contact us at sales@standss.com for assistance regarding deployment using Microsoft Intune.

Deploy SendGuard M365 using Office 365 Admin Centre

You can utilize Office 365 Admin Centre to deploy SendGuard for M365. If you have previously deployed the add-in, there is no need for redeployment as the new updates have already been pushed out. If you wish to modify your settings or require additional information regarding the deployment of SendGuard M365, please reach out to your account manager or contact sales@standss.com
