Priority Updates.....	6
Deploy using Microsoft Intune	6
Deploy SendGuard M365 using Office 365 Admin Centre.....	6

OVERVIEW

Standss is excited to announce the release of SendGuard quarterly updates. This is a new release and contains new features, improvements, and bug fixes.

The key highlights of this release include **obtaining Microsoft 365 Certification**, introducing **new DLP/Custom Rules**, and **enabling updates to DLP/Custom Rules** through the Standss SendGuard License Management system.

Users of previous versions will need to contact their account manager at Standss (or email us at sales@standss.com) to upgrade and get their new license information.

The following sections have more information on what's new, what's fixed and updates/deployment.

SendGuard COM-Addin (Windows Desktop)

There is no updates for the COM-Addin in this quarter.

SendGuard M365 Addin (For New Outlook (Windows & Mac), Outlook Web Access & Legacy Outlook for Mac)

WHAT'S NEW

SendGuard is Microsoft 365 Certified

The Microsoft 365 App Certification program reviews the app security, the practices and procedures the app publisher employs. While customer data is under control of the app publisher, you can rest assured that Microsoft has validated that the app will handle it in a safe and secure manner.

During this process, **SendGuard was thoroughly evaluated against security controls based on industry standards, including SOC 2, PCI DSS, and ISO 27001.**

New DLP/Custom rules to check Recipients count greater than X number of threshold

SendGuard M365 has a new feature to monitor recipient count exceeding a specified threshold. This feature prompts users when they reach or exceed this limit, ensuring they utilize the Data Loss Prevention (DLP), or custom rules feature effectively. Administrators can integrate this functionality with existing rule conditions for a more robust and customizable email security solution.

New DLP/Custom Rules to check Attachment Count greater than X number of threshold

SendGuard M365 has a new feature to monitor Attachment counts exceeding a specified threshold. This feature prompts users when they reach or exceed this limit, ensuring they utilize the Data Loss Prevention (DLP) or custom rules feature effectively. Administrators can integrate this functionality with existing rule conditions for a more robust and customizable email security solution.

Improvements

Color coding for external recipients on SendConfirm

The SendConfirm feature in SendGuard M365 has been enhanced with improved color coding for external recipient domains.

Color-coded domains help you to instantly recognize the email recipient's domain and can prevent you from sending emails to the incorrect recipient.

Improved Network Resilience

SendGuard now can function effectively even with a poor internet network connection. By utilizing code files from the cache, users can continue to send emails without interruptions, ensuring better reliability under varying network conditions.

Enhanced App Security

The security of the SendGuard app has been significantly enhanced to comply with the Microsoft 365 App Compliance Program. This update provides robust protection against external threats, improving the overall security and compliance of the SendGuard application.

Delay Send

The Delay Send feature has been updated so that users can also apply schedule send manually if they want. If the user has applied a greater time for schedule send manually, the email will be sent out at that time.

Fixes

Issue Resolved: Prompts appearing twice on New Outlook for Mac

We have successfully resolved an issue for SendConfirm and DLP where users were experiencing duplicate prompts after clicking the Send button.

Issue Resolved: CORS Issue in different regions

We have successfully resolved an issue where SendGuard was not functioning properly due to CORS issues with the libraries used. Users can now use SendGuard in different countries and regions without encountering CORS errors.

Issue Resolved: DLP/Custom rules did not trigger if SendConfirm is turned off

We have resolved an issue where DLP/Custom rules did not function if the SendConfirm feature was turned off. The DLP/Custom rules now work independently, ensuring that they operate correctly even if SendConfirm is disabled. Administrators can now enable DLP/Custom rules without relying on the SendConfirm feature, providing more stability.

Issue Resolved: SendConfirm prompt for External Recipients on Classic Outlook for Windows

We have resolved an issue where the SendConfirm prompt would incorrectly appear in Classic Outlook on Windows when configured to alert for "Sending to External recipients or Attachment" even if the email was only sent to internal users. This fix ensures that prompts now appear accurately, improving the user experience and reducing unnecessary alerts.

Standss SendGuard License Management System

WHAT'S NEW

Custom/DLP Rule Management

The license management system now supports the creation, updating, and deletion of Custom/DLP rules directly from the UI. This allows IT administrators to easily manage rules without relying on Account managers at Standss for changes. With this functionality, admins can efficiently maintain and adjust rules as needed, streamlining rule management and improving overall productivity.

Improvements

Enhanced Login: Expanded Role Support

The login using Microsoft Work/School accounts now supports Global Administrators, Application Administrators, and Cloud Application Administrators. These roles can now manage subscriptions directly through the license management system, providing more flexibility and control for managing your SendGuard environment.

SendGuard M365 Settings UI Enhancement

The user interface for updating settings has been improved for clarity and usability for IT administrators. The updated UI is designed to make it easier for Admins to manage settings, ensuring an efficient configuration experience

Enhanced App Security

The security of the SendGuard License Management system has been significantly enhanced to comply with the Microsoft 365 App Compliance Program. This update provides robust protection against external threats, improving the overall security and compliance of the SendGuard add-in.

DEPLOYING THE NEW VERSION:

MSI

Please contact your account manager at Standss or email us at sales@standss.com for a link to the latest file. We can assist you to deploy the new version with your existing or new settings.

Use Group Policy Object (GPO) Templates (ADMX)

There has been some changes to the registry structure and as a result the ADMX template for deployment is done via GPO.

Please contact us at sales@standss.com for the updated ADMX/ADML file to deploy and maintain settings.

Priority Updates

SendGuard offers an annual maintenance model which ensures that businesses get the best updates and support from our highly skilled staff.

Deploy using Microsoft Intune

SendGuard for Outlook is a per-machine software and therefore can be deployed via Intune. SendGuard will be installed silently if all registered devices are set-up correctly.

Please contact us at sales@standss.com for assistance regarding deployment using Microsoft Intune.

Deploy SendGuard M365 using Office 365 Admin Centre

You can utilize Office 365 Admin Centre to deploy SendGuard for M365. If you have previously deployed the add-in, there is no need for redeployment as the new updates have already been pushed out. If you wish to modify your settings or require additional information regarding the deployment of SendGuard M365, please reach out to your account manager or contact sales@standss.com
