OVERVIEW

Standss is excited to announce the release of SendGuard quarterly updates. This is a new release and contains new features, improvements, and bug fixes.

The key highlights of this release include **Intune deployment for COM-Addin** , **simple non-interactive prompt and various bug fixes to the SendGuard365 addin**.

Users of previous versions will need to contact their account manager at Standss (or email us at sales@standss.com) to upgrade and get their new license information.

The following sections have more information on what's new, what's fixed and updates/deployment.

SendGuard COM-Addin (Windows Desktop)

WHAT'S NEW

Intune Deployment

SendGuard now includes the ability to export your configuration settings in a PowerShell script format, ready for Intune deployment. This simplifies the process for administrators, allowing for quicker and easier deployment of SendGuard settings across your organization using Microsoft Intune.

Non-Interactive Prompt (SendGuard Lite Version)

SendGuard now a **basic, non-interactive prompt** to confirm recipients and attachments before sending emails. We have also introduced a Lite version that consists of only this prompt. The Lite plan provides a streamlined experience with minimal interaction, for **lower-risk environments** where simple confirmation is sufficient. The interactive prompts in the Pro and Premium versions continue to provide the best security for organizations dealing with sensitive or private data.

Bugs

Fix: Account Guard Prompt Always Displayed

Resolved an issue where the **Account Guard prompt** was not consistently shown. With this fix, users will now always see the prompt, allowing them to select the correct sending account from their Outlook profile before sending an email.

Fix: Reply All Prompt for Internal Recipients

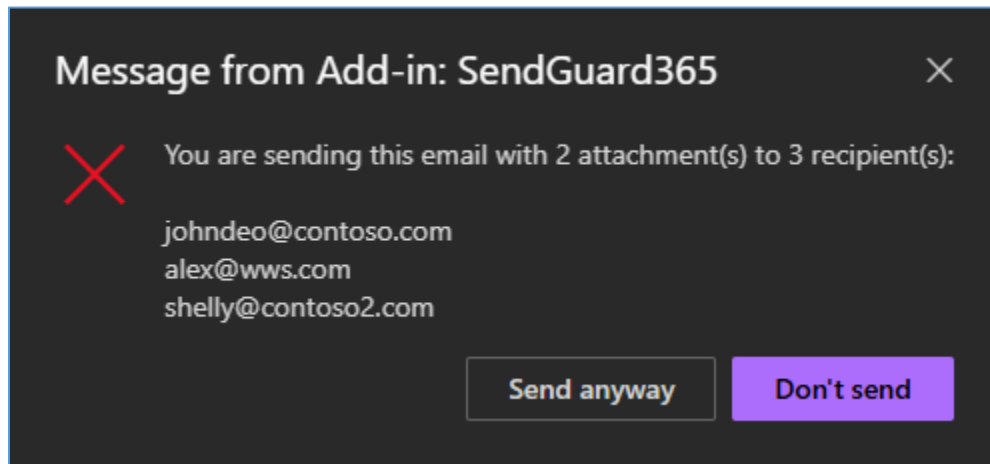

Fixed an issue where the **Reply All confirmation prompt**, when configured to trigger for external recipients only, was incorrectly appearing for internal recipients as well. This was caused by a corrupt registry key, which has now been resolved to ensure the prompt works as intended.

SendGuard365 Addin (For New Outlook (Windows & Mac), Outlook Web Access & Legacy Outlook for Mac)

WHAT'S NEW

New Plan: SendGuard Lite Version

SendGuard365 now offers a **Lite version**, designed for users who require a simpler confirmation process. This version displays a **basic, non-interactive prompt** to confirm recipients and attachments before sending an email. The Lite plan provides a streamlined SendConfirm experience with minimal interaction, making it ideal for environments where simple confirmation is sufficient.

Improvements

Enhancement: Unnecessary Open Task Pane Prompt for Internal Recipients in Classic Outlook

Resolved an issue in **Classic Outlook** where the open task pane prompt incorrectly appeared even when emails were addressed to internal recipients only, despite the prompt being configured for external recipients. The task pane will now only open when required.

Enhancement: Task Pane Addin on Outlook for Mac

The **Send button** has been removed from the task pane in Outlook for Mac, as the Send API is not supported on this platform. Instead, users will now see a clear notification within the task pane explaining this limitation.

Enhancement: Improved Keyboard Navigation for Task Pane addin

Enhanced the **Taskpane UI** for better accessibility. Users can now navigate more efficiently using the **Tab** and **Enter** keys, making it easier to select options like "All" and send emails without relying on a mouse.

Security: Third-Party Package Updates:

Several **third-party libraries** flagged for vulnerabilities have been updated. These updates help maintain the **security and stability** of the application, ensuring a safer experience for all users.

Bugs

Fix: Contact Drag-and-Drop Issue in Classic Outlook

Resolved an issue where, **dragging and dropping a contact** from one contact folder to another in **Classic Outlook** caused SendGuard to block the email after the SendConfirm screen when the contact was used as a recipient.

- **Cause:** The contact did not have an associated email address.
- **Fix:** SendGuard now displays a **prompt showing the contact's display name**, allowing the user to review and proceed with sending the email.

Fix: Duplicate Attachment Headers in New Outlook

Resolved an issue in the new Outlook, where updating an existing meeting request with attachments caused the attachment headers to appear multiple times in the confirmation prompt. This has been fixed to ensure attachment details are displayed correctly and only once.

Fix: Meeting request stuck in Outlook Classic

Resolved an issue in **Classic Outlook** whereby, sending or updating meeting requests could cause emails to get stuck, requiring a restart of Outlook to send them. This issue has now been resolved for smoother meeting request handling.

Standss SendGuard Management Console

WHAT'S NEW

Enhancement: Streamlined Self-Service Trial Process for New Customers

New customers who do not have any existing SendGuard licenses under their tenants can now **quickly create trial licenses** and start using SendGuard in **under 10 minutes**. This enhanced self-service process makes it easier than ever for new organizations to get started without assistance, enabling faster evaluation and adoption.

Improvement: Save Reminder on SendGuard Settings Screen

Enhanced the **SendGuard settings screen** to improve usability. Now, when users make any changes to the settings, a **notification banner** is displayed to remind them to **save their changes**, helping prevent accidental loss of configuration updates.

DEPLOYING THE NEW VERSION:

Priority Updates

SendGuard offers an annual subscription model which ensures that businesses get the best updates and support from our highly skilled staff.

SendGuard COM- Addin Deployment

MSI

Please contact your account manager at Standss or email us at sales@standss.com for a link to the latest file. We can assist you to deploy the new version with your existing or new settings.

Deploy using Microsoft Intune

SendGuard for Outlook is a per-machine software and therefore can be deployed via Intune. SendGuard will be installed silently if all registered devices are set-up correctly.

Please contact us at sales@standss.com for assistance regarding deployment using Microsoft Intune.

Use Group Policy Object (GPO) Templates (ADMX)

If there have been changes to the registry keys, an ADMX template is required for deployment via GPO.

Please contact us at sales@standss.com for the updated ADMX/ADML file to deploy and maintain settings.

SendGuard365 Addin Deployment

Office 365 Admin Centre

You can utilize Office 365 Admin Centre to deploy SendGuard365. If you have previously deployed the add-in, there is no need for redeployment as the new updates have already been pushed out. If you wish to modify your settings or require additional information regarding the deployment of SendGuard365, please reach out to your account manager or contact sales@standss.com.
